Mediana EVOLUTION

Silent accomplice

Mediana Evolution represents the state of the art of the interior door locks panorama. It is a synthesis of the know-how achieved by AGB after many years of consolidated leadership in this sector.

Silent, versatile, with an essential design, *Mediana Evolution* meets the market trends and the users requirements.

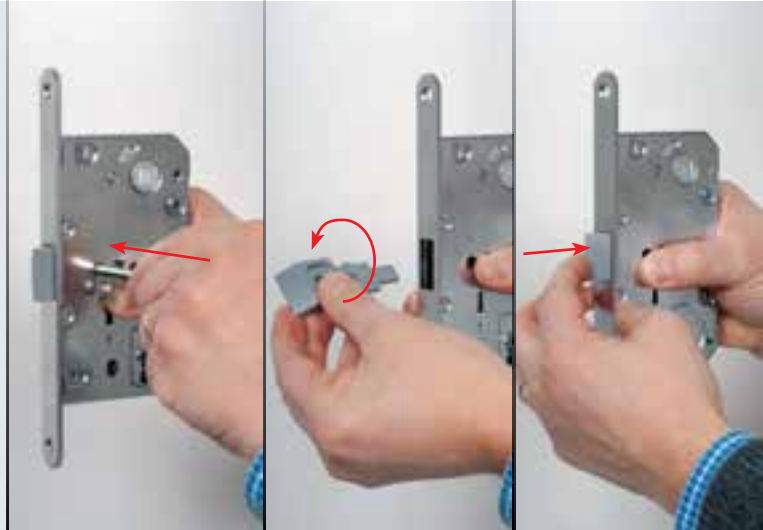

QUICK LATCH®

...and the handing changes

QUICK LATCH® is a new patented fast latch coupling system: just a few seconds to extract it, to orient it according to the door handing and to insert it again in its seat.

QUICK LATCH® is the only latch-system with auto-guided sliding.

*Polyamide
latch version*

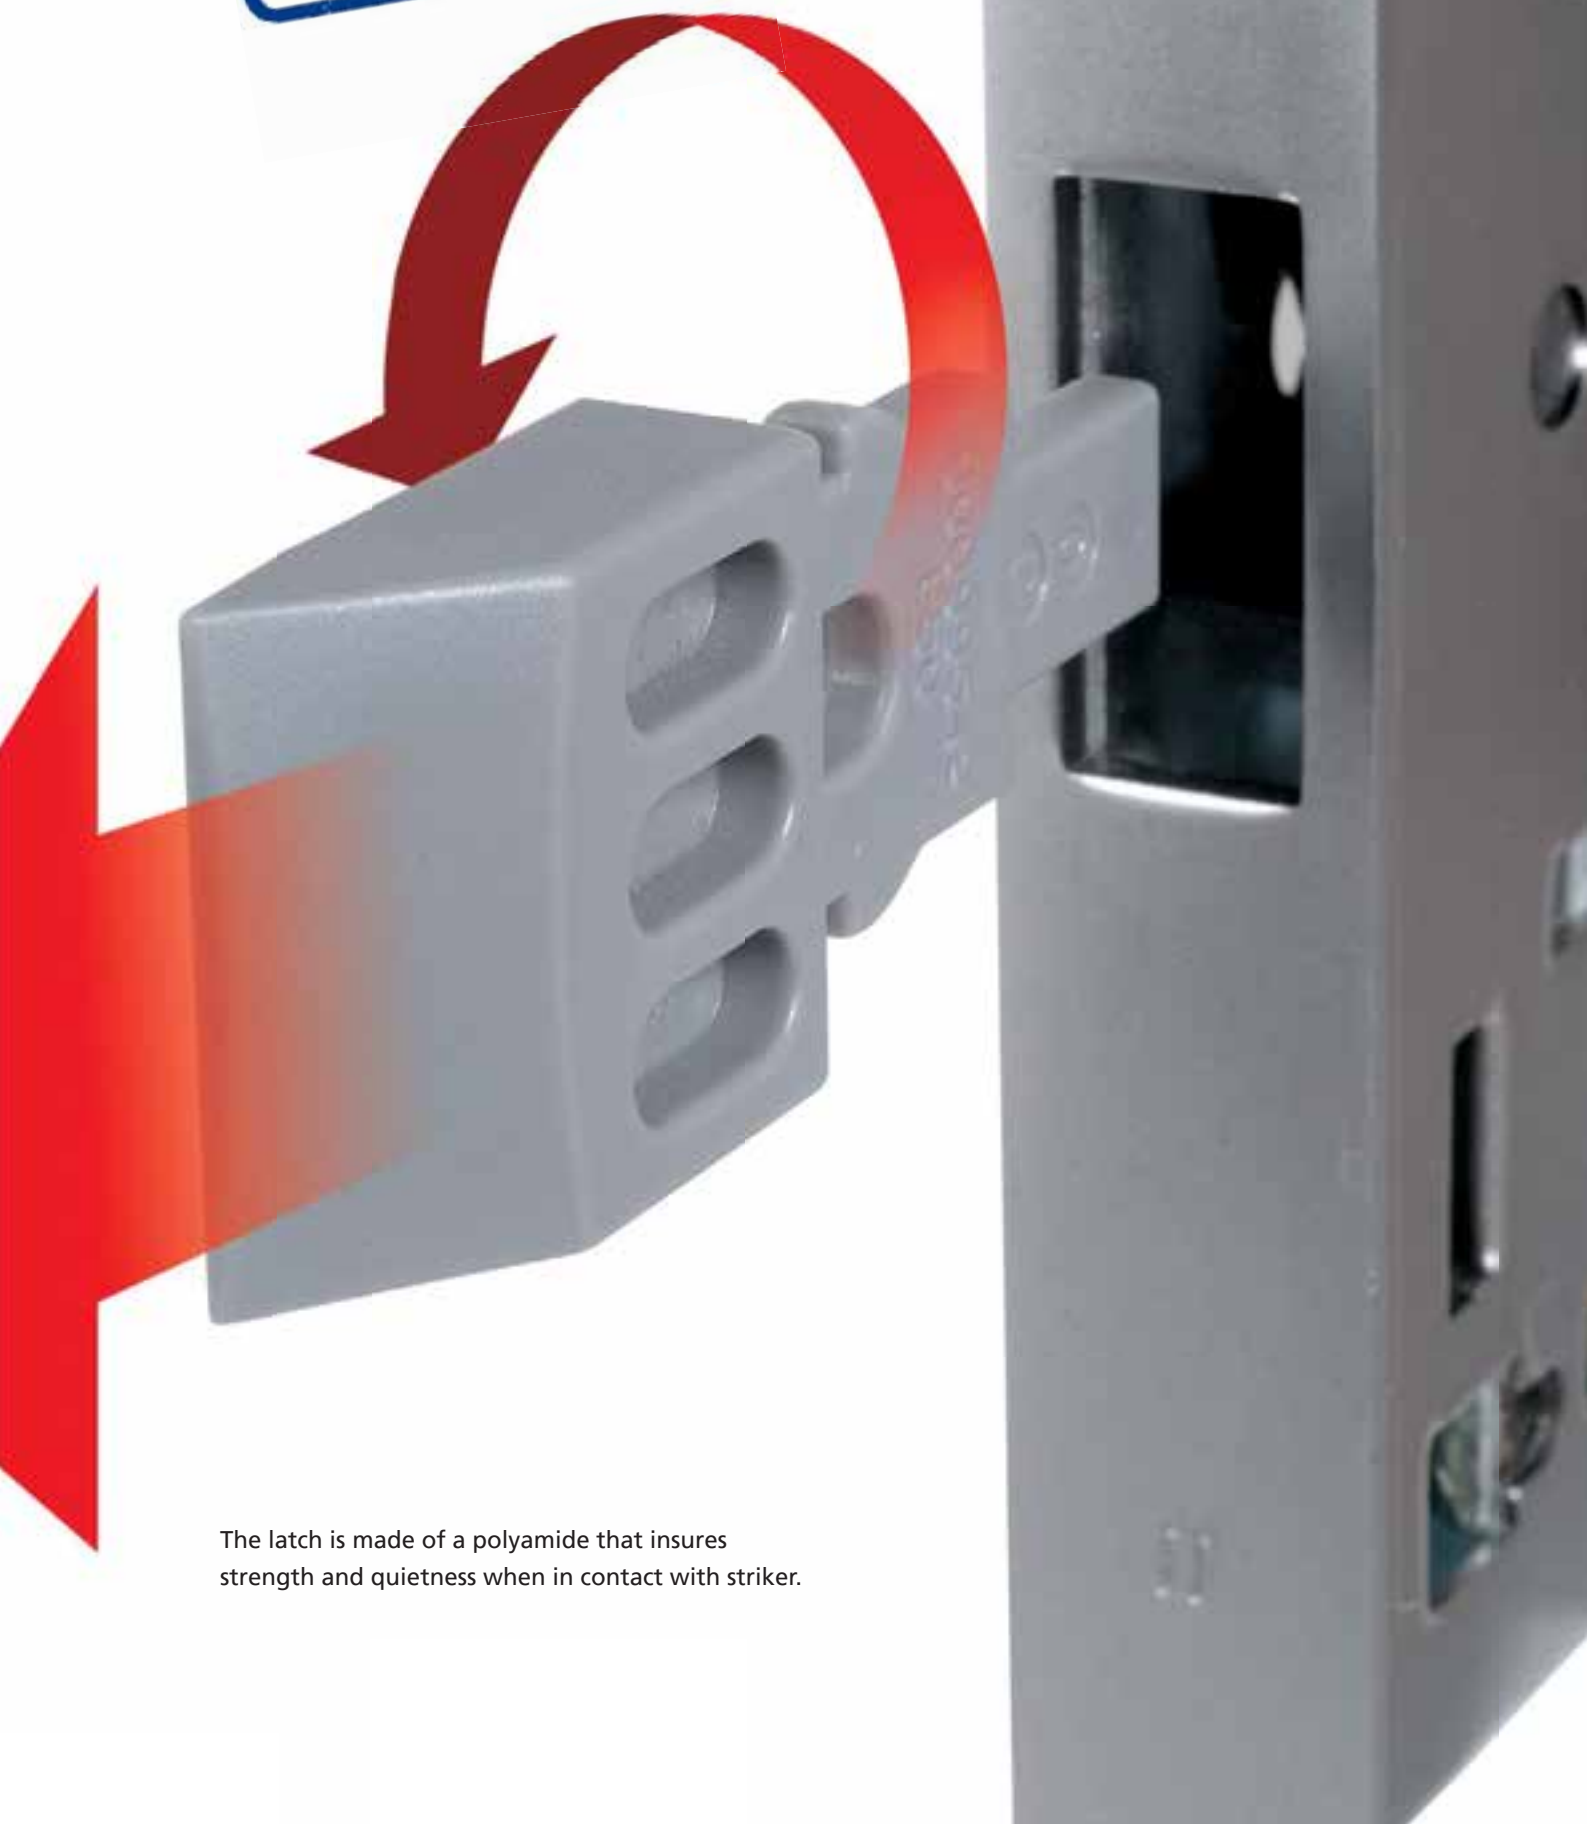

*Metal latch
version*

The latch-bolt reduces the milling in the frame, notably improving beauty and reducing working time.

PATENTED

The latch is made of a polyamide that insures strength and quietness when in contact with striker.

Good sensation... excellent performance

A fast and safe movement

The opening/closing movement of the handle has been reduced to 30°. Even when the latch is blocked by the key, the handle can freely rotate, avoiding damage due to unintentional forcings.

The key closes with a click

A soft and regular key turn, a precise end stroke.
The pleasant sensations by turning **Mediana Evolution** key are brought by a device carefully designed by AGB designers.

We did it 500,000 times!

Mediana Evolution bore an opening-closing test (UNI 9173:1988) for more than 500.000 cycles maintaining its functionality.
Moreover, the excellent quality of the finishes is guaranteed by the periodical corrosion tests carried out according to the DIN 50021 regulations with salt fog.

Internal AGB laboratories test

Precision comes from the heart

The MEDIANA concept is the starting point which has inspired a complete re-designing of the internal mechanism. Solid and reliable like all AGB locks, **Mediana Evolution** is made of technologically innovative materials and offers new advantages:

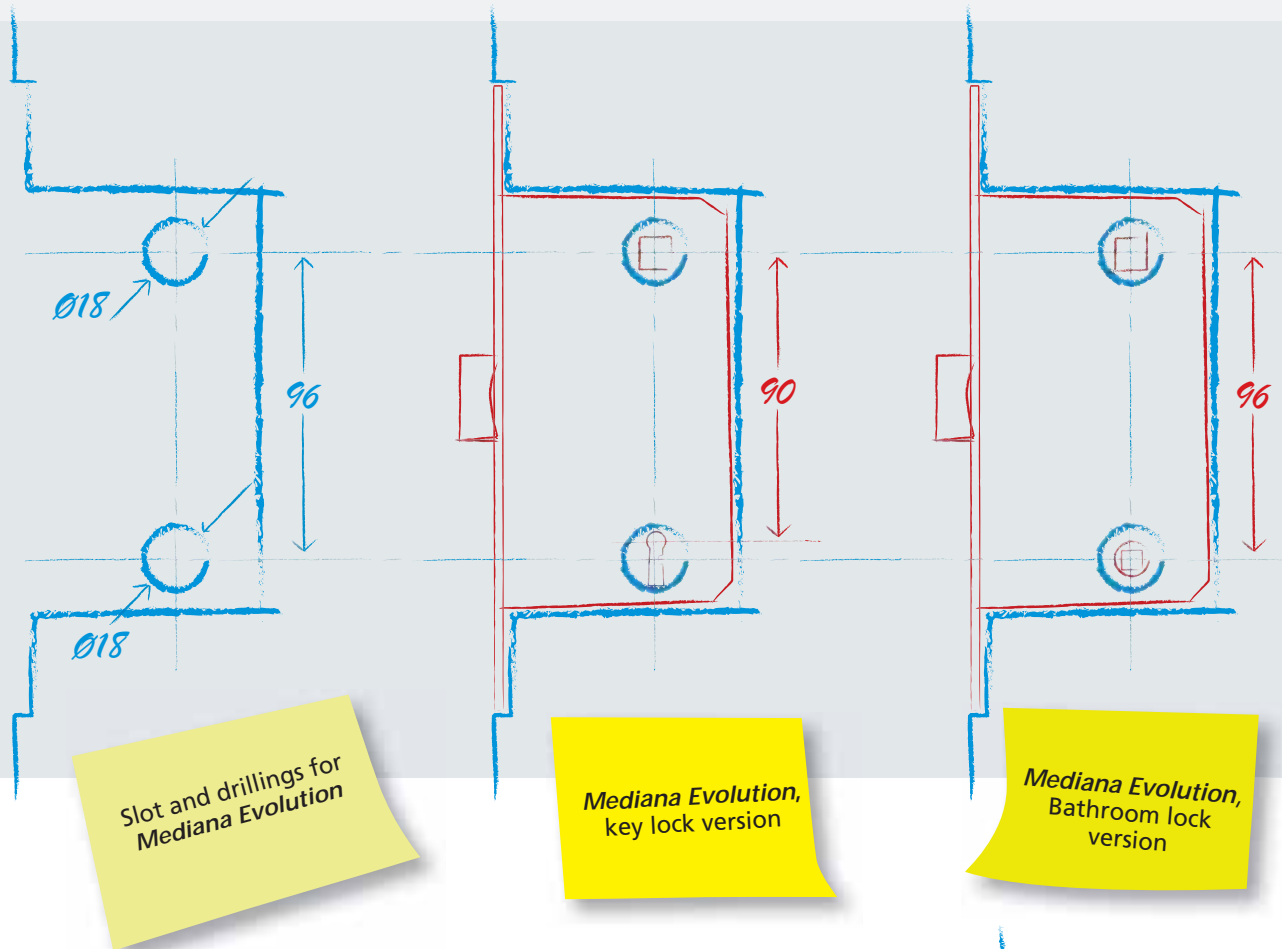

- extraordinary quiet movement,
- precision in the mechanical coupling,
- smooth internal kinematics.

Incomparable versatility

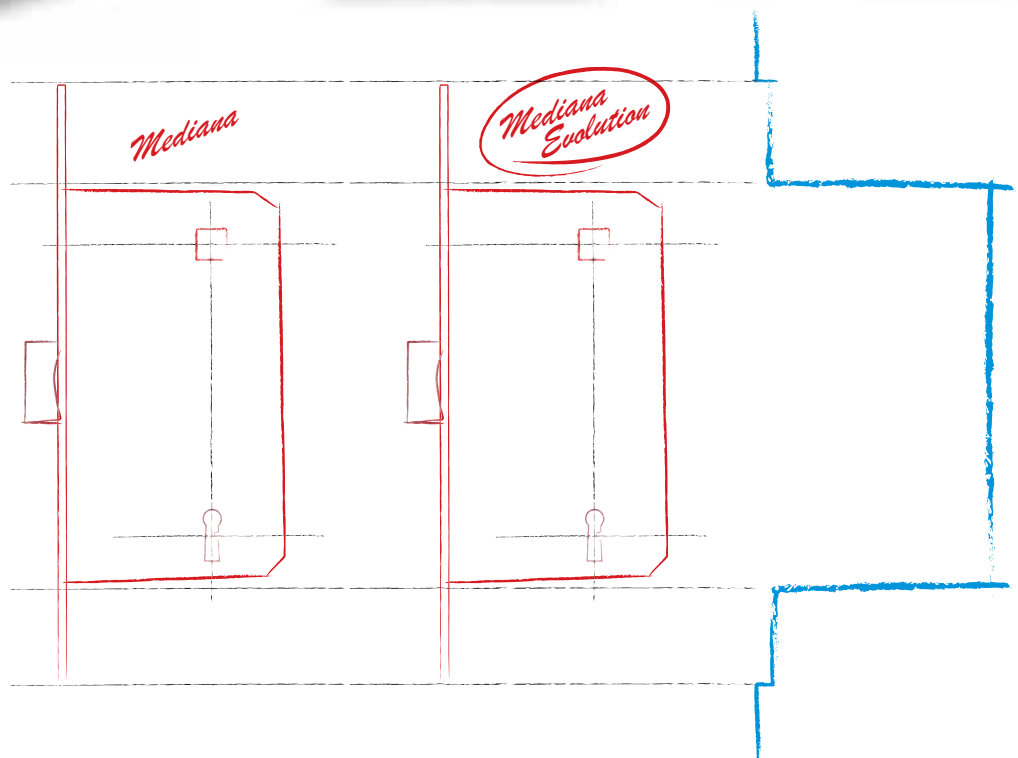

STANDARDISED DRILLING

Key and Bathroom lock versions have been designed to allow a single drilling with reduced diameter.

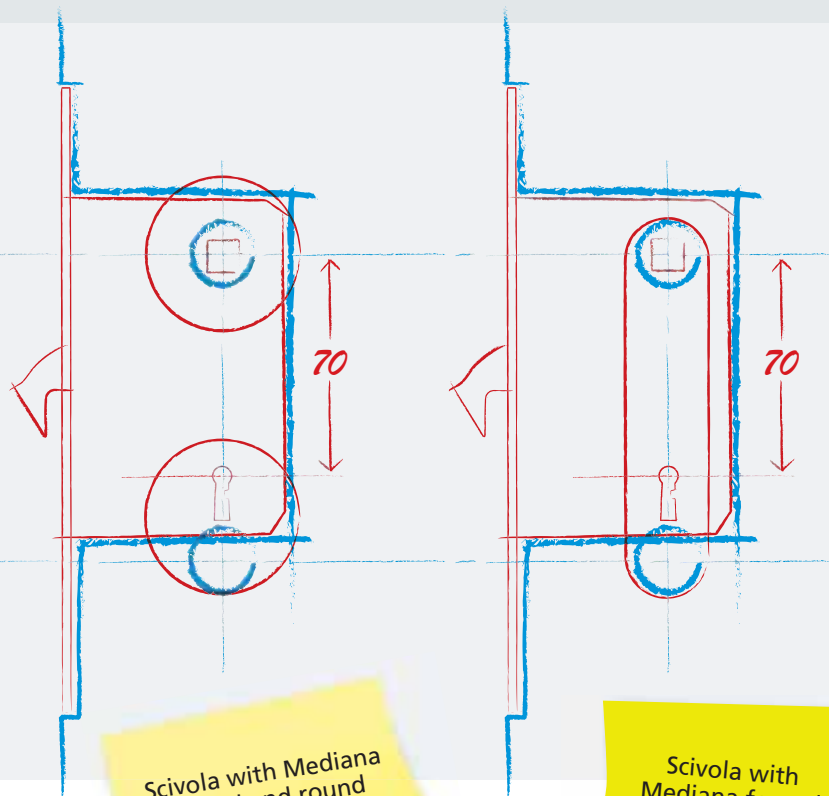

Replaceability for a long time.

Forend and case dimensions are compatible with Mediana ones.

MEDIANA PROGRAM FOR SLIDING DOORS

The drilling of *Mediana Evolution* allows the transformation of swinging panel doors into sliding ones.

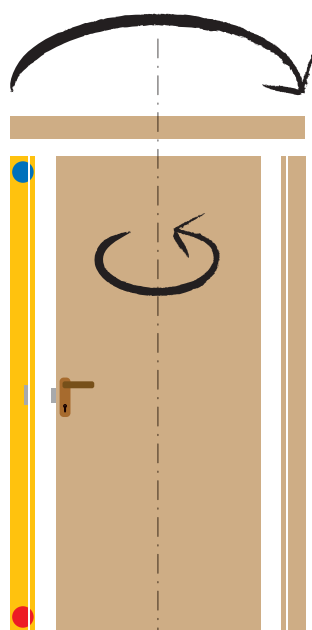

Scivola with Mediana forend and round handles

Scivola with Mediana forend and oval handles

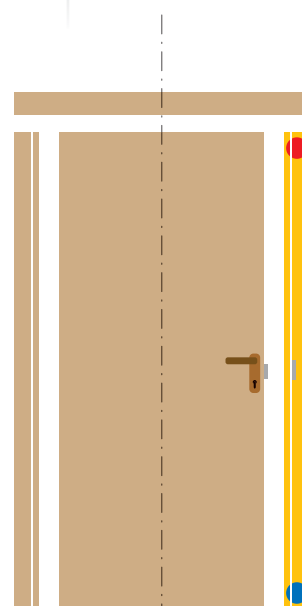

Mediana Evolution is very versatile and ensures interesting saving opportunities to the door manufacturers.

Door and frame reversibility.

Thanks to the short striker, a proper study of the door system allows the reversibility of door and jamb, allowing remarkable benefits for the store.
